Développement d'iso-anticorps anti- $\alpha_{IIb}\beta_3$ dans la thrombasthénie de Glanzmann : Données préliminaires (étude TAAS)

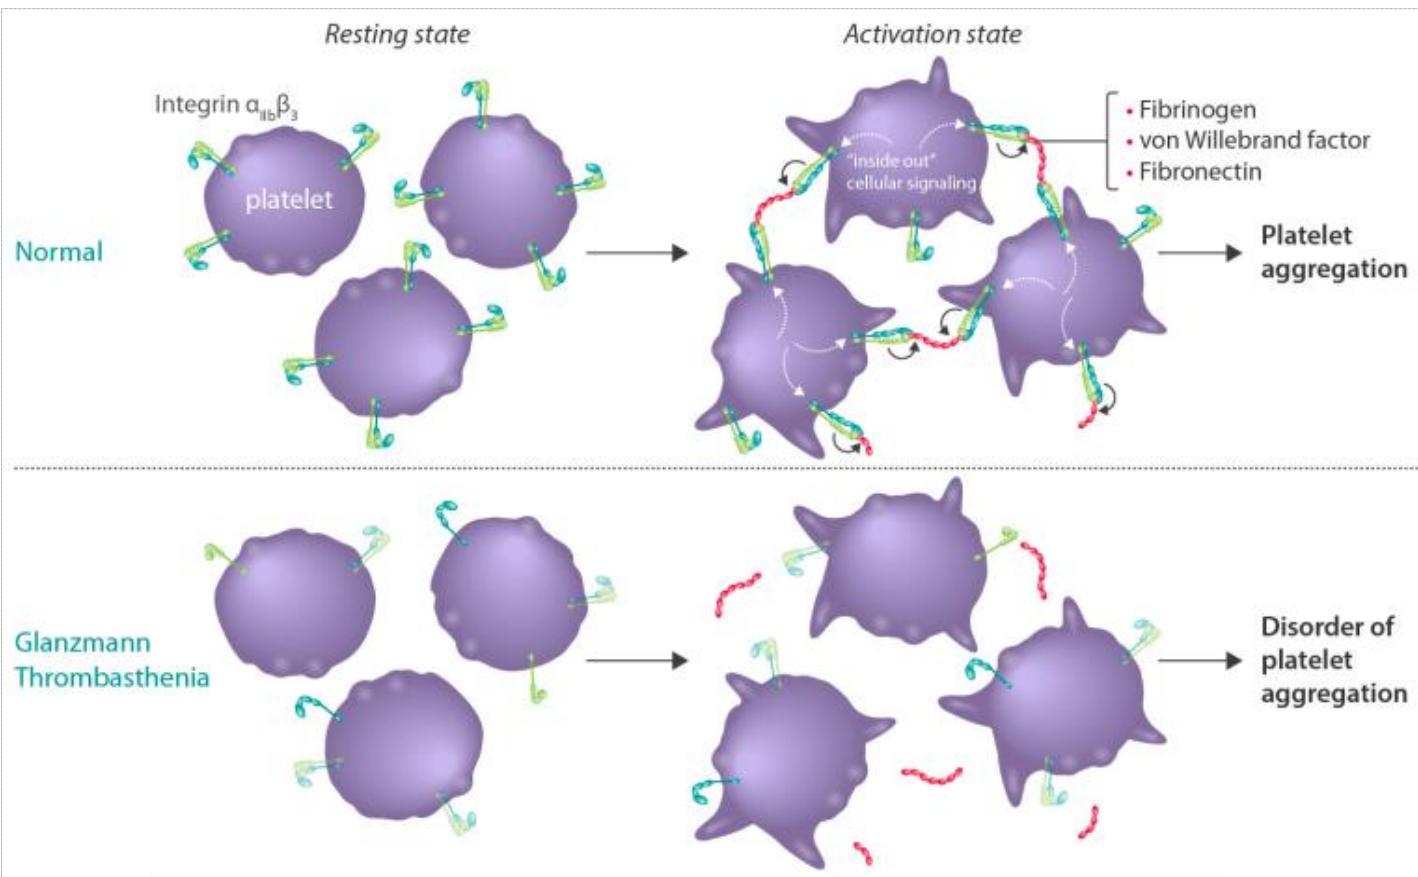

Dr. Mathieu FIORE

Laboratoire d'Hématologie, CRPP
CHU de Bordeaux

Thrombasthénie de Glanzmann (TG)

Maladie hémorragique autosomique récessive rare causée par l'absence ou la dysfonction de l'intégrine $\alpha_{IIb}\beta_3$

Mutations dans le gène *ITGA2B* ou *ITGB3*

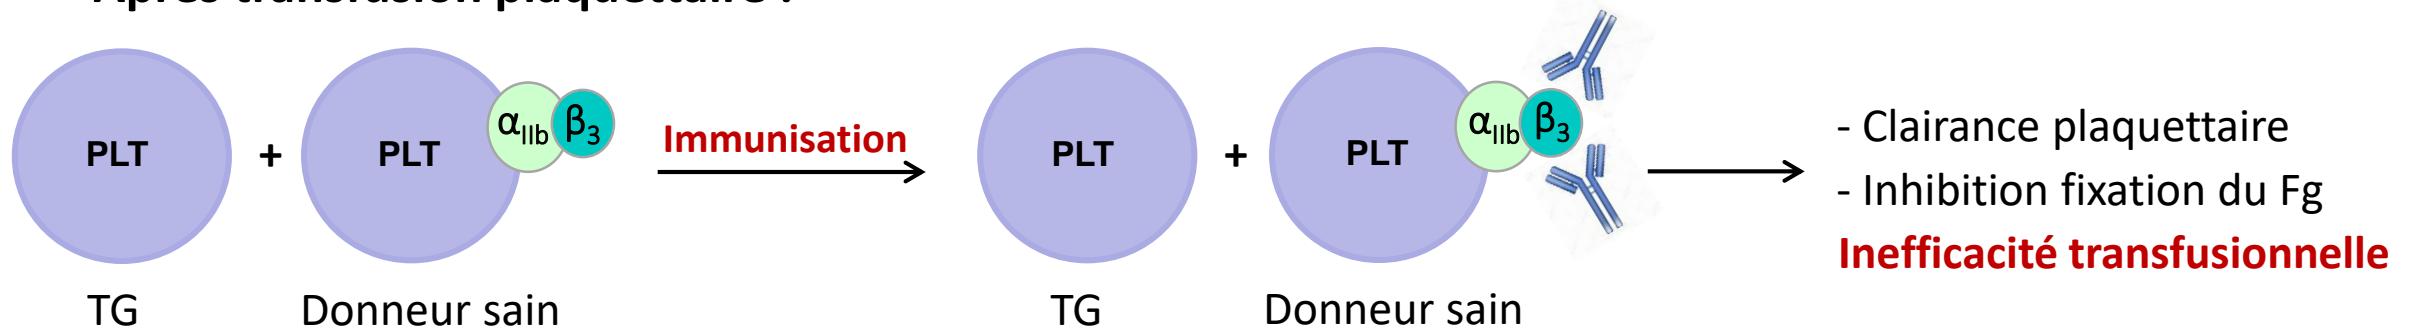

3 sous-types :

- Types I ($< 5\%$) et II (5-20%) : anomalie quantitative
- « Variant » TG : anomalie qualitative

Concentrés plaquettaires (PLT) sont utilisés pour prévenir et traiter les saignements pouvant engager le pronostic vital

Iso-immunisation anti- $\alpha_{IIb}\beta_3$

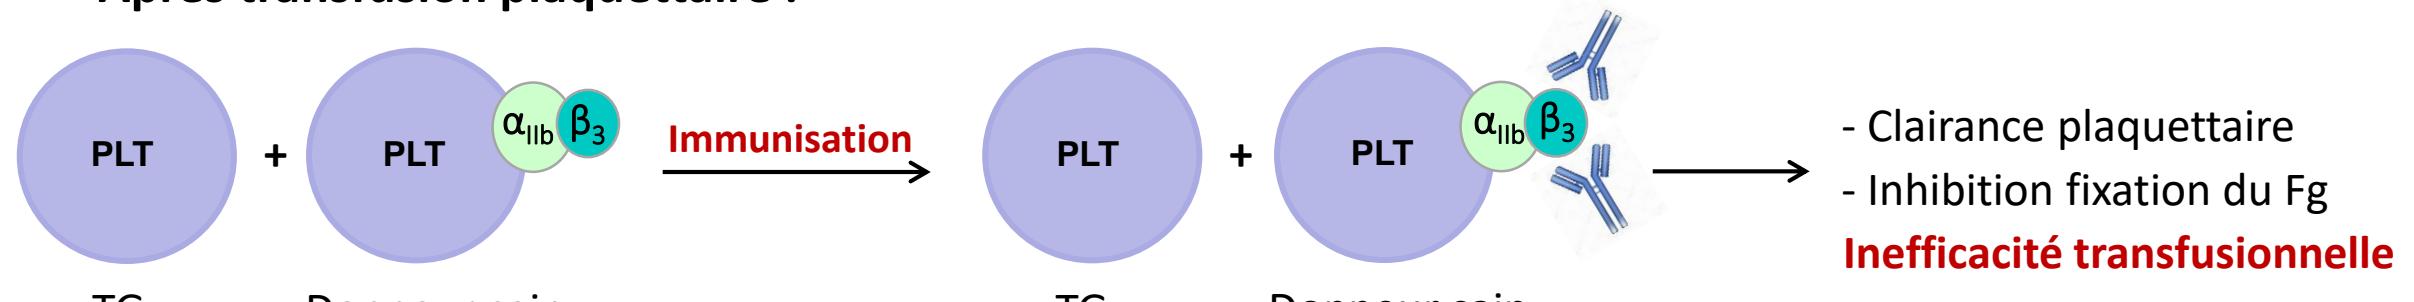

- Après transfusion plaquettaire :

!! Risque hémorragique !!

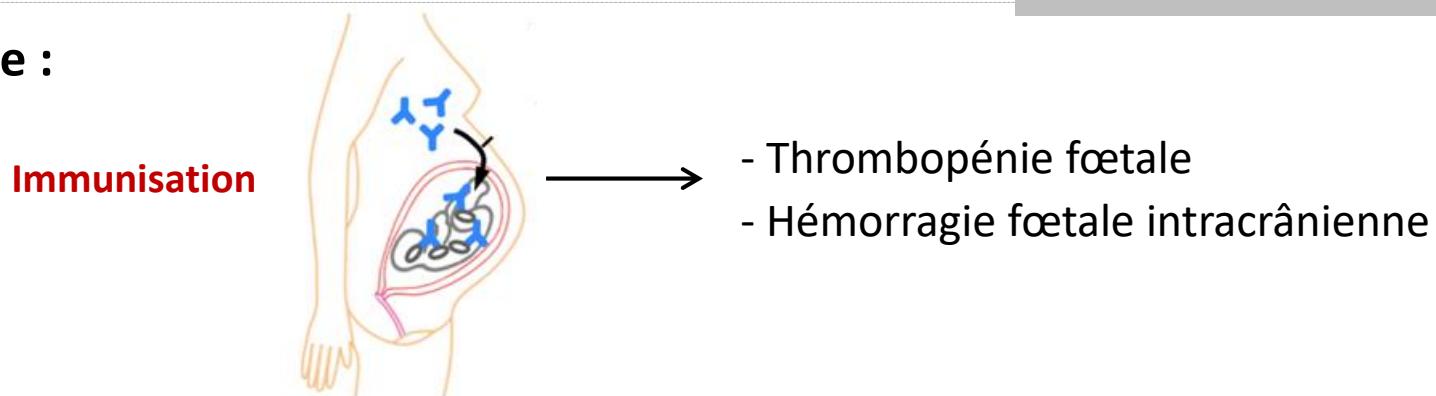

Iso-immunisation anti- $\alpha_{IIb}\beta_3$

- Après transfusion plaquettaire :

!! Risque hémorragique !!

- Au cours d'une grossesse :

Epidémiologie anti- $\alpha_{IIb}\beta_3$

Table I. Studies reporting the incidence of anti- $\alpha_{IIb}\beta_3$ antibodies in Glanzmann thrombasthenia.

Total patients (n)	Patients screened (n)	Positive cases [n (%)]	Methods	References
177	Not specified	6 (3.5%)	Not specified	George <i>et al</i> (1990)
59	54	21 (39%)	MAIPA; other immunological methods; methods based on inhibition of normal platelet aggregation by the patient's plasma	Poon <i>et al</i> (2004)
17	16	2 (12.5%)	MAIPA / ELISA using the commercial plate (PAK2-LE)	Santoro <i>et al</i> (2010)
24	24	13/16 (81%) of the French Gypsy patients and 2/8 (25%) of the patients with other GT mutations	MAIPA	Fiore <i>et al</i> (2012)
83	Not specified	20 (24%)	Not specified	Nurden <i>et al</i> (2015)
218	Not specified	47 (22%)	Not specified	Poon <i>et al</i> (2016)

ELISA, enzyme-linked immunosorbent assay; GT, Glanzmann thrombasthenia; MAIPA, monoclonal antibody-specific immobilization of platelet antigens.

Fiore *et al.*, British Journal Of Haematology, 2018

Facteurs de risques associés aux anticorps anti- $\alpha_{IIb}\beta_3$?

Sexe, type de TG, origine ethnique, mutation génétique, antécédents transfusionnels ?

Objectifs de l'étude TAAS

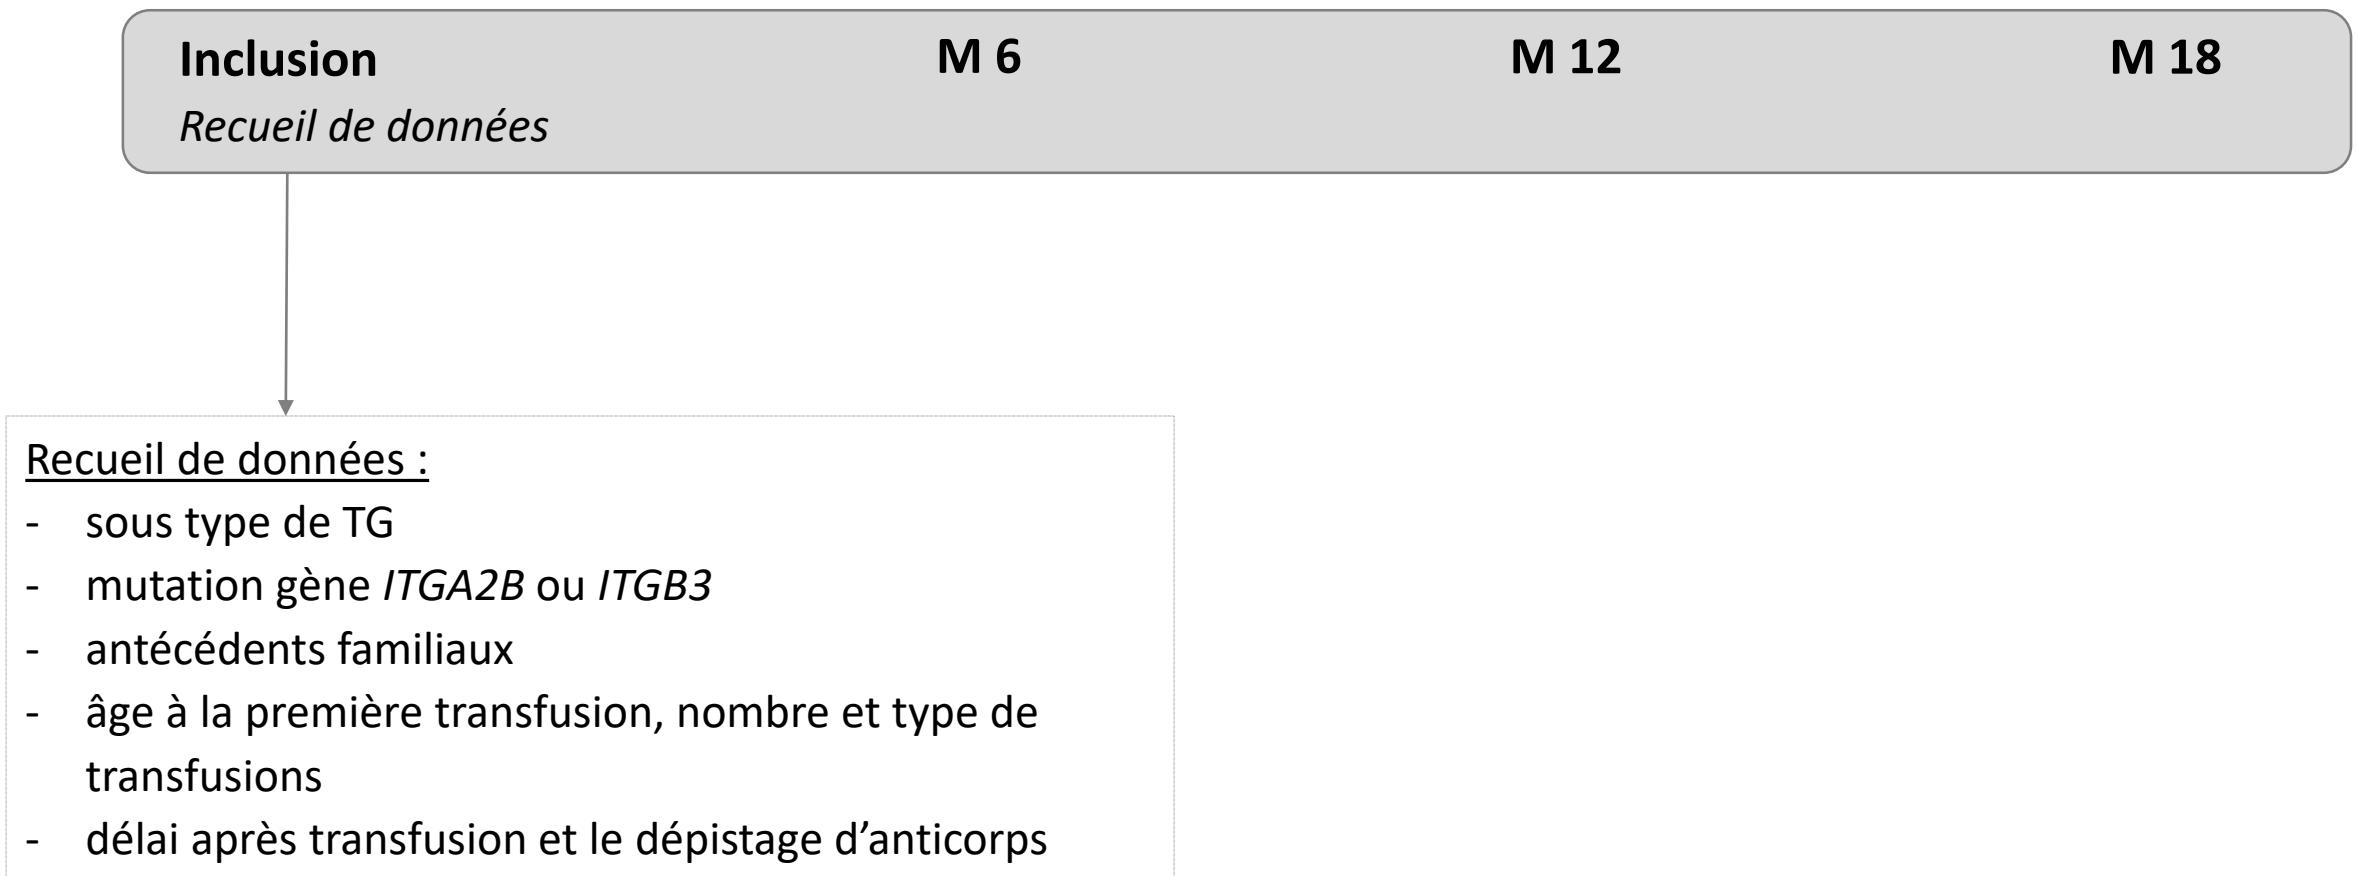

(*Thrombasthenia Anti- $\alpha_{IIb}\beta_3$ Antibodies Study*) : NCT04595617

- **Déterminer la prévalence** de l'immunisation dans une cohorte française de patients atteints de TG
- **Identifier les facteurs de risques** génétiques, socio-démographiques et thérapeutiques d'immunisation
 - **Décrire la cinétique** d'immunisation grâce à une étude prospective
 - **Déterminer le mécanisme d'inhibition** des anticorps anti- $\alpha_{IIb}\beta_3$

Matériels et Méthodes

Etude nationale prospective multicentrique (Bordeaux, Le Kremlin-Bicêtre, Marseille, Nîmes, Strasbourg, Toulouse)

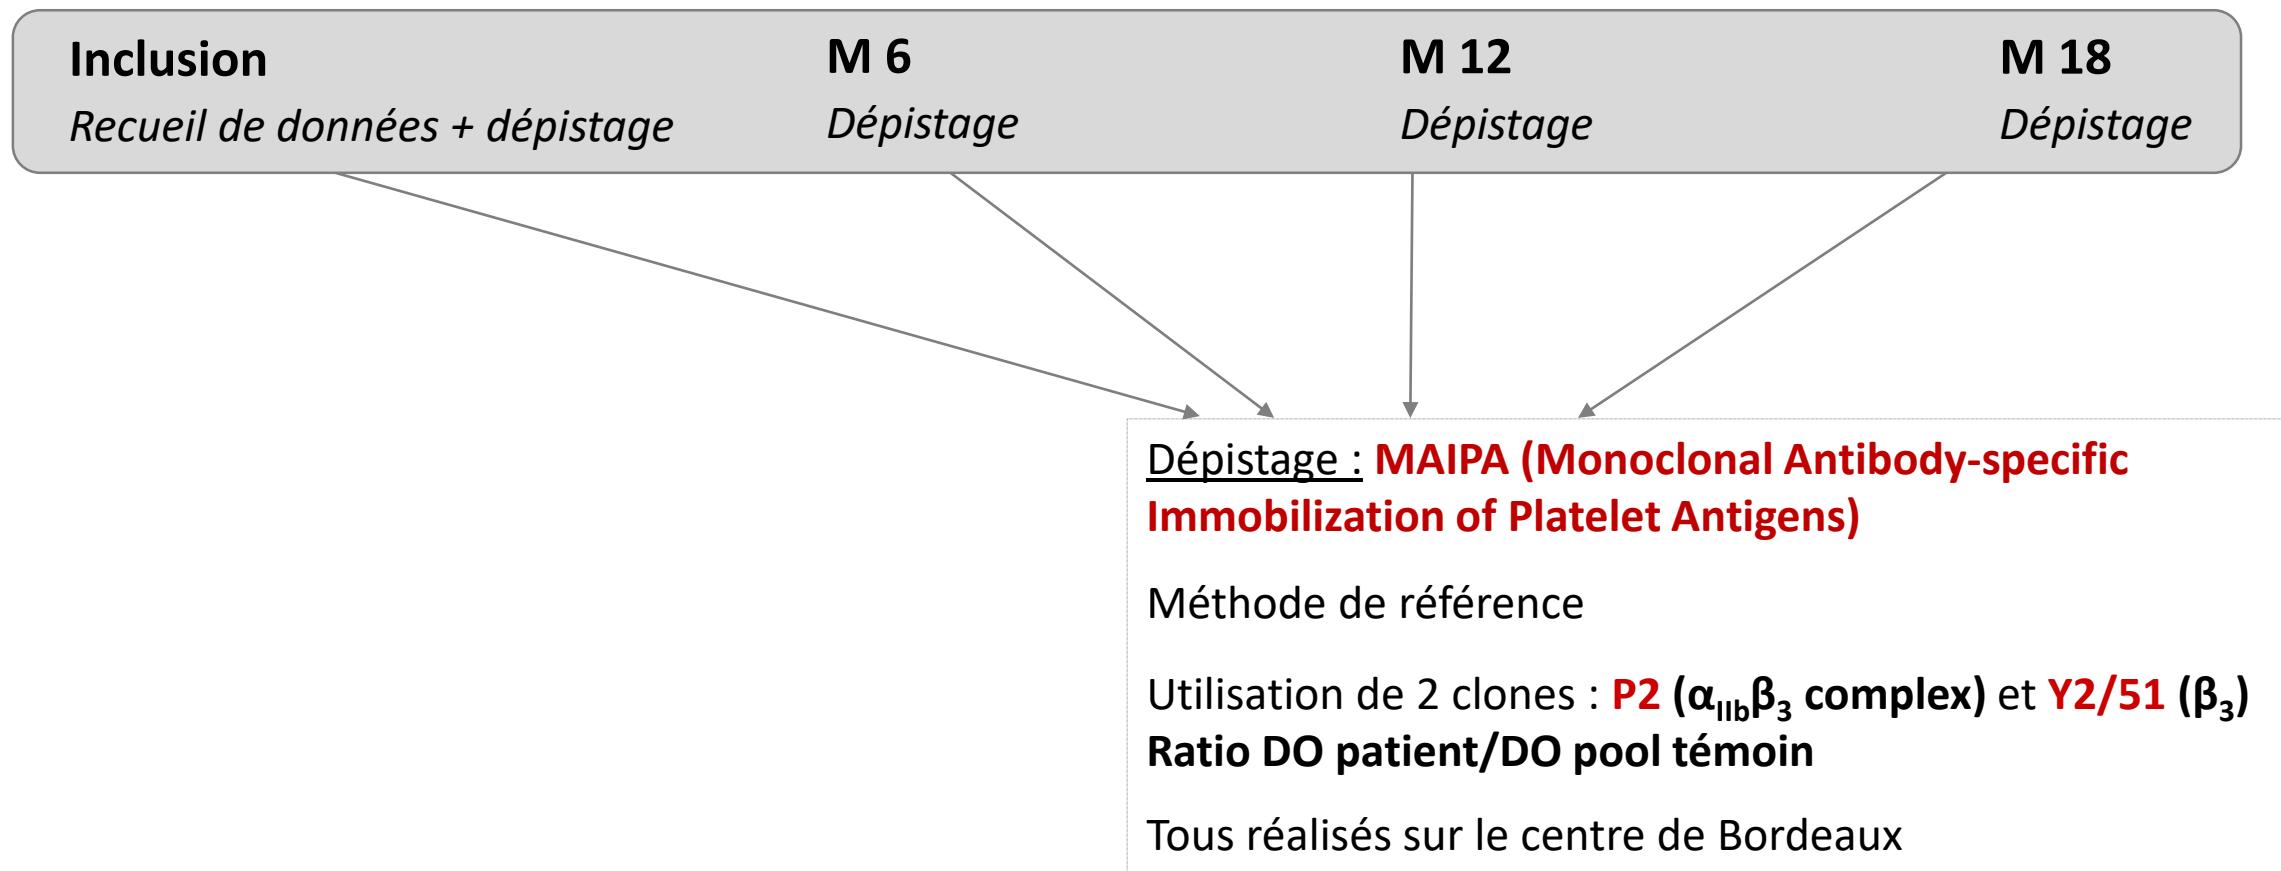

Inclusion de tout patient avec un diagnostic de certitude de TG, objectif : 40 patients

Matériels et Méthodes

Etude nationale prospective multicentrique (Bordeaux, Le Kremlin-Bicêtre, Marseille, Nîmes, Strasbourg, Toulouse)

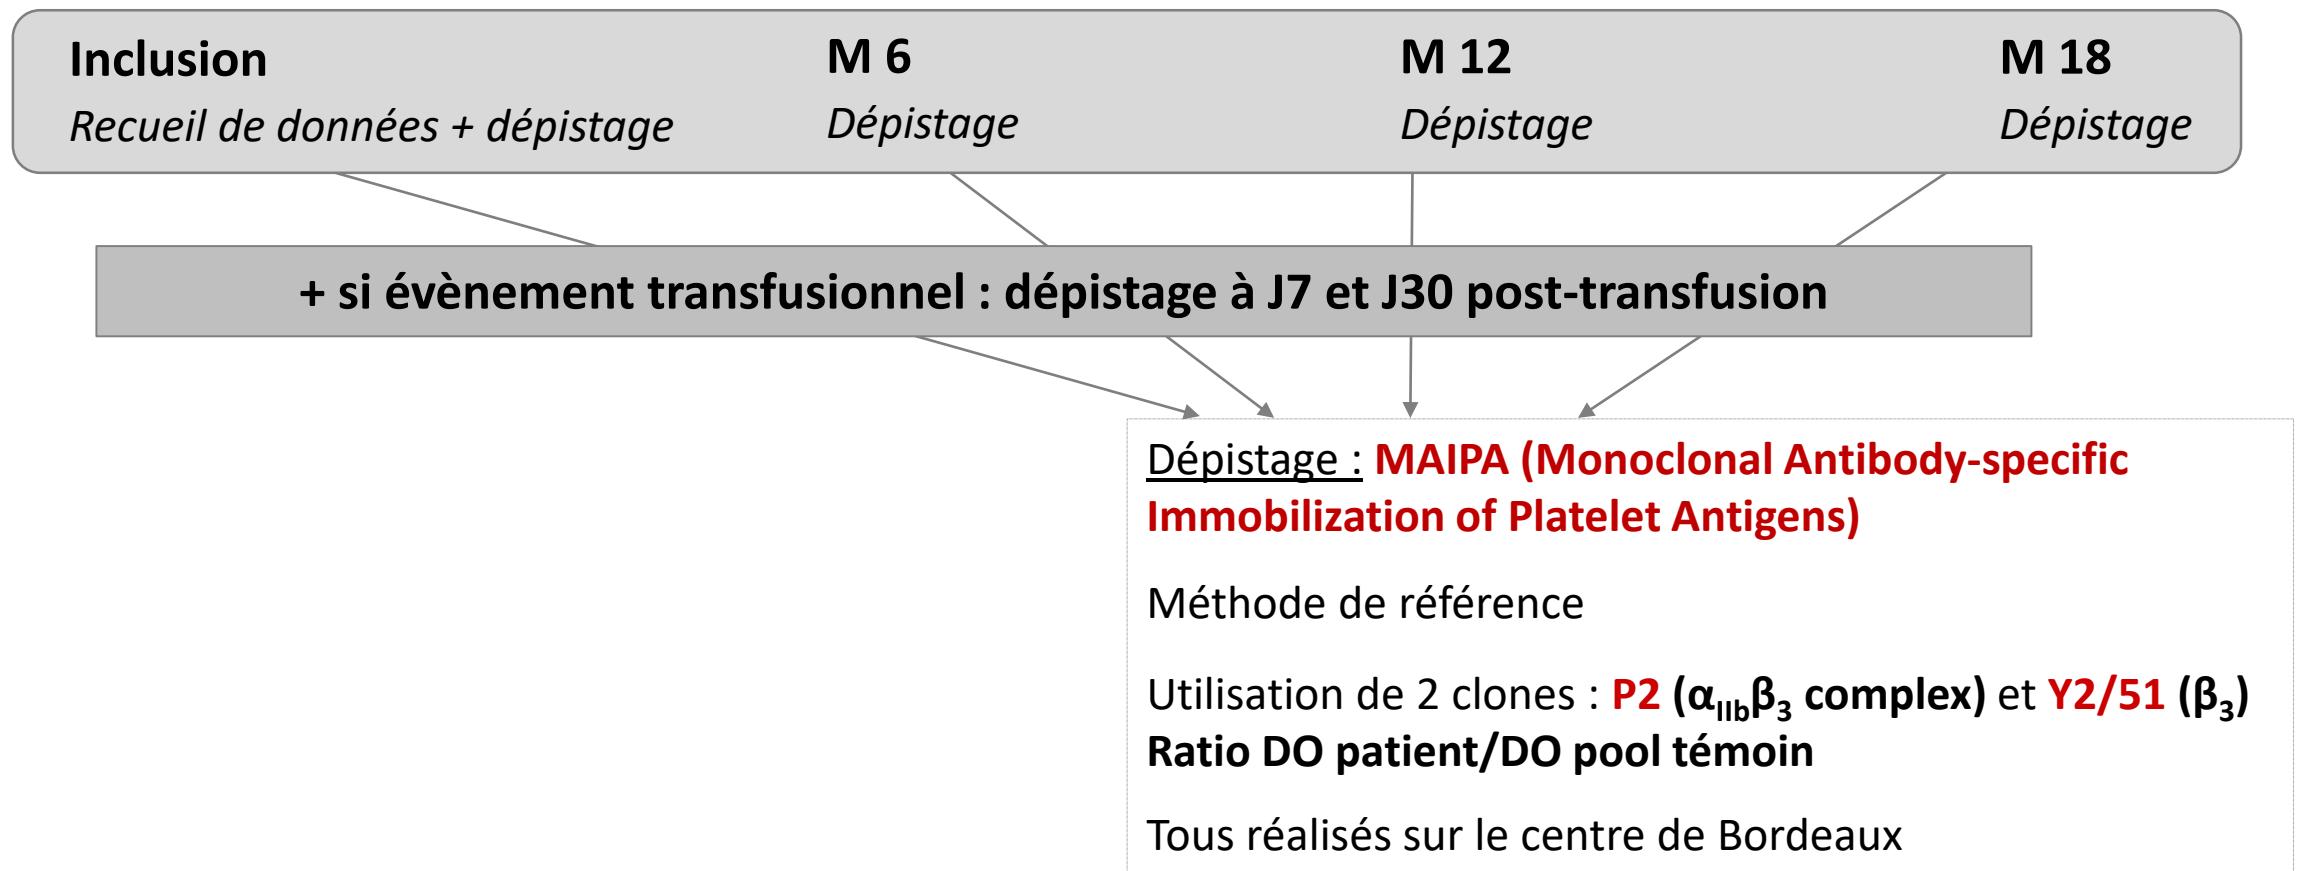

Inclusion de tout patient avec un diagnostic de certitude de TG, objectif : 40 patients

Matériels et Méthodes

Etude nationale prospective multicentrique (Bordeaux, Le Kremlin-Bicêtre, Marseille, Nîmes, Strasbourg, Toulouse)

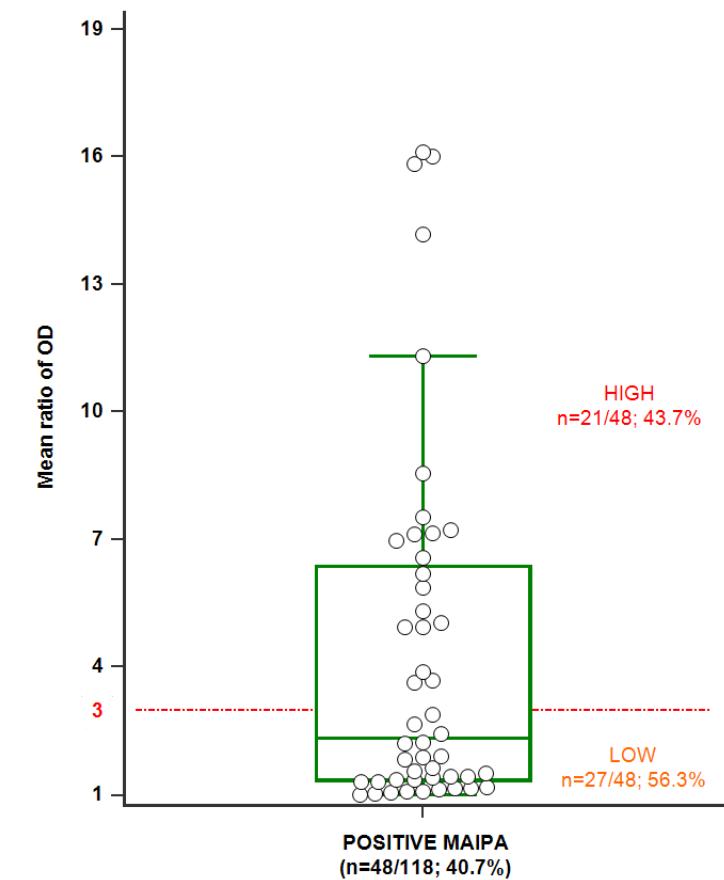

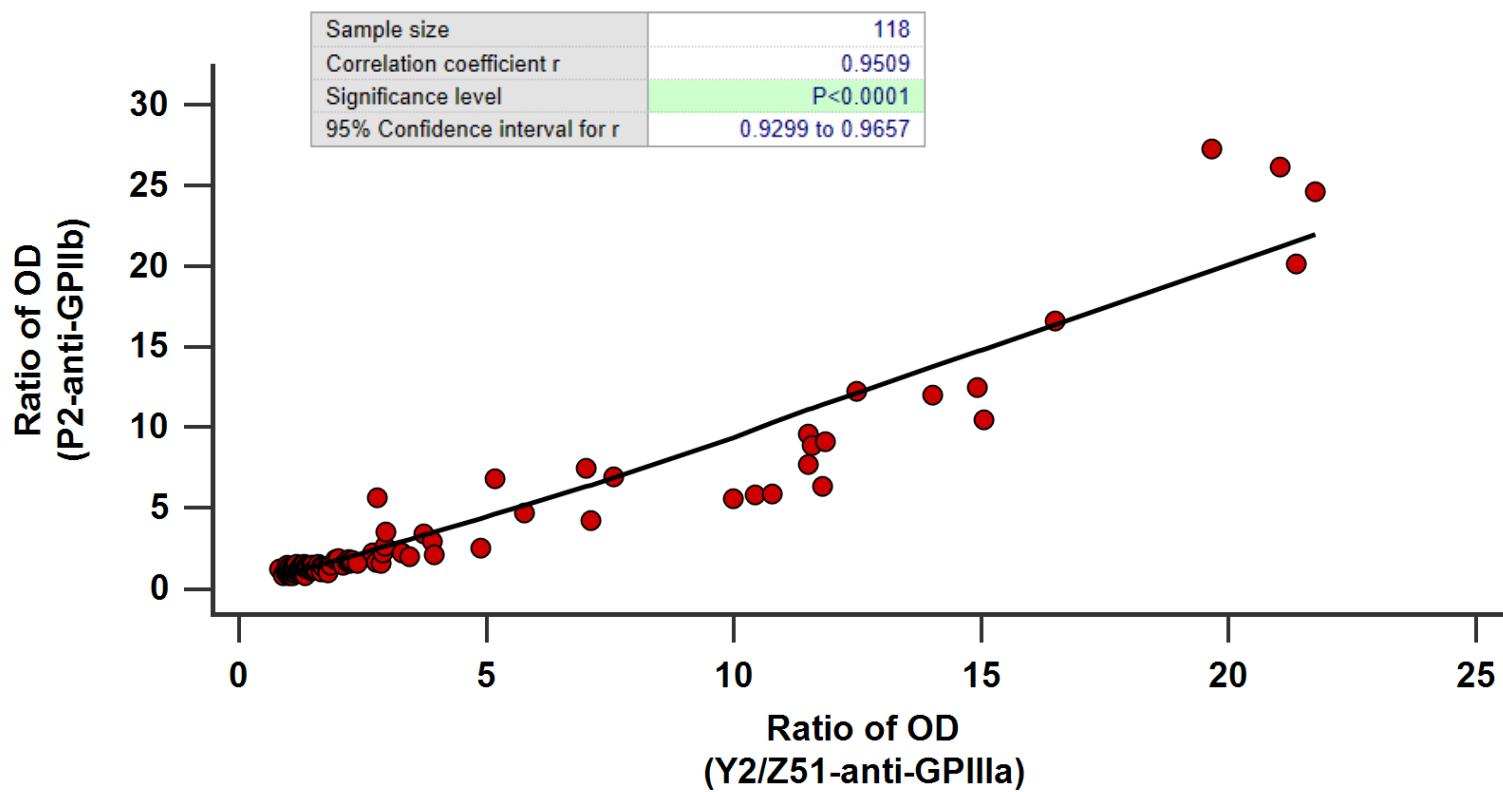

Inclusion de tout patient avec un diagnostic de certitude de TG, objectif : 40 patients

Résultats

Inclusion de **41 patients** entre janvier et octobre 2021

Présentation des **données préliminaires sur le suivi sérologique : 118 sérum**s analysés

French Gypsy patients and the development of platelet anti- $\alpha_{IIb}\beta_3$ antibodies (at inclusion)

n=19/41; 46.3%

Variables	Anti- $\alpha_{IIb}\beta_3$ antibodies			p
	All (n=19; 100.0%)	Negative (n=4; 21.1%)	Positive (n=15; 78.9%)	
Age, median [IQR]	37.0 [28.5-58.2]	31.0 [26.5-42.0]	39.0 [29.7-59.0]	0.34
Male, n (%)	7/19 (36.8)	2/7 (28.6)	5/7 (71.4)	0.6
Female, n (%)	12/19 (63.2)	2/12 (16.7)	10/12 (83.3)	
Family history of anti- $\alpha_{IIb}\beta_3$ antibodies	13/16 (81.2)	3/4 (75.0)	10/12 (83.3)	1
Blood products administration, n (%)	19/19 (100.0)	4/4 (100.0)	15/15 (100.0)	1
Platelet concentrates (PC) administration	15/18 (83.3)	4/4 (100.0)	11/14 (78.6)	1

- Age at inclusion = 37.0 years (28.5-58.2)
- Male-to-female ratio = 0.58
- **83.3% had received at least once platelet transfusions**
- **78.8% had positive Abs**
- Three positive patients had never received treatment with platelet concentrates

Relationship between blood product administrations and antibody expression in Gypsy patients

Variables	Anti- $\alpha_{IIb}\beta_3$ antibodies			
	All (n=19; 100.0%)	Negative (n=4; 21.1%)	Positive (n=15; 78.9%)	p
Number of PLT administration				
nb < 5	6/14 (42.9)	3/4 (75.0)	3/10 (30.0)	
nb = 5-10	1/14 (7.1)	1/4 (25.0)	0/10 (0.0)	0.04
nb > 10	7/14 (50.0)	0/4 (0.0)	7/10 (70.0)	
Type of PLT				
Apheresis, n=12	12/12 (100.0)	2/2 (100.0)	10/10 (100.0)	1
HLA-compatible, n=9	1/9 (11.1)	0/2 (0.0)	1/7 (14.3)	1
MCPS, n=11	10/11 (90.9)	2/2 (100.0)	8/9 (88.9)	1
RBC administration	17/18 (94.4)	3/4 (75.0)	14/14 (100.0)	0.22
Total number (nb) of RBC				
nb < 5	6/17 (35.3)	1/3 (33.3)	5/14 (35.7)	1
nb = 5-10	2/17 (11.8)	0/3 (0.0)	2/14 (14.3)	
nb > 10	9/17 (52.9)	2/3 (66.6)	7/14 (50.0)	
Age at first blood products administration, n=19	10.0 [5.2-30.7]	4.0 [2.0-11.0]	20.0 [8.5-31.7]	0.08
PLT	12/16 (75.0)	3/4 (75.0)	9/12 (75.0)	1
RBC	10/18 (55.6)	2/4 (50.0)	8/14 (57.1)	1
Time to last blood products administration	5.0 [2.1-15.0]; n=18	11.5 [1.7-23.0]; n=4	5 [2.1-11.7]; n=15	0.65
PLT	4.2 [2.0-12.5]; n=8	23.0 [20.0-26.0]; n=2	3.0 [2.0-4.5]; n=6	0.04
RBC	5.5 [2.5-12.0]; n=14	3.0 [1.1-15.7]; n=3	6.0 [3.0-11.7]; n=11	0.77

- Patients with anti- $\alpha_{IIb}\beta_3$ Abs had **received more platelet concentrates**

- **Shorter time to last platelet transfusions**

Relationship between other factors and antibody expression in Gypsy patients

Variables	Anti- $\alpha_{IIb}\beta_3$ antibodies			
	All (n=19; 100.0%)	Negative (n=4; 21.1%)	Positive (n=15; 78.9%)	p
Age at first blood products administration	10.0 [5.2-30.7]	4.0 [2.0-11.0]	20.0 [8.5-31.7]	0.08
Pregnancies	5/11 (45.0)	0/2 (0.0)	5/9 (55.6)	0.45
Positive anti-HLA Abs	6/19 (31.6)	0/4 (0.0)	6/15 (40.0)	0.25

Pregnancies were reported in five women, all of which had developed anti- $\alpha_{IIb}\beta_3$ antibodies

Positive patients tended to be older at first blood products administration and to be more frequently positive for anti-HLA antibodies

Variable	All (n=14; 100.0)	Total number (nb) of PC			p
		nb < 5; 6/14 (42.9)	nb = 5-10; 1/14 (7.1)	nb > 10; 7/14 (50.0)	
Age at first blood products transfusion	20.5 [6.0-32.0]	11.0 [2.0-21.0]	2.0 [2.0-2.0]	32.0 [22.5-33.7]	0.05
Time to last PC administration, n=13	4.0 [2.0-13.0]	11.0 [2.9-21.5]	0.5 [0.5-0.5]	4.0 [2.0-8.6]	0.2
Pregnancies	4/9 (44.0)	0/2 (0.0)	0/1 (0.0)	4/6 (66.7)	0.7
Anti-HLA Abs	6/14 (42.3)	1/6 (16.7)	0/1 (0.0)	5/7 (71.4)	0.1

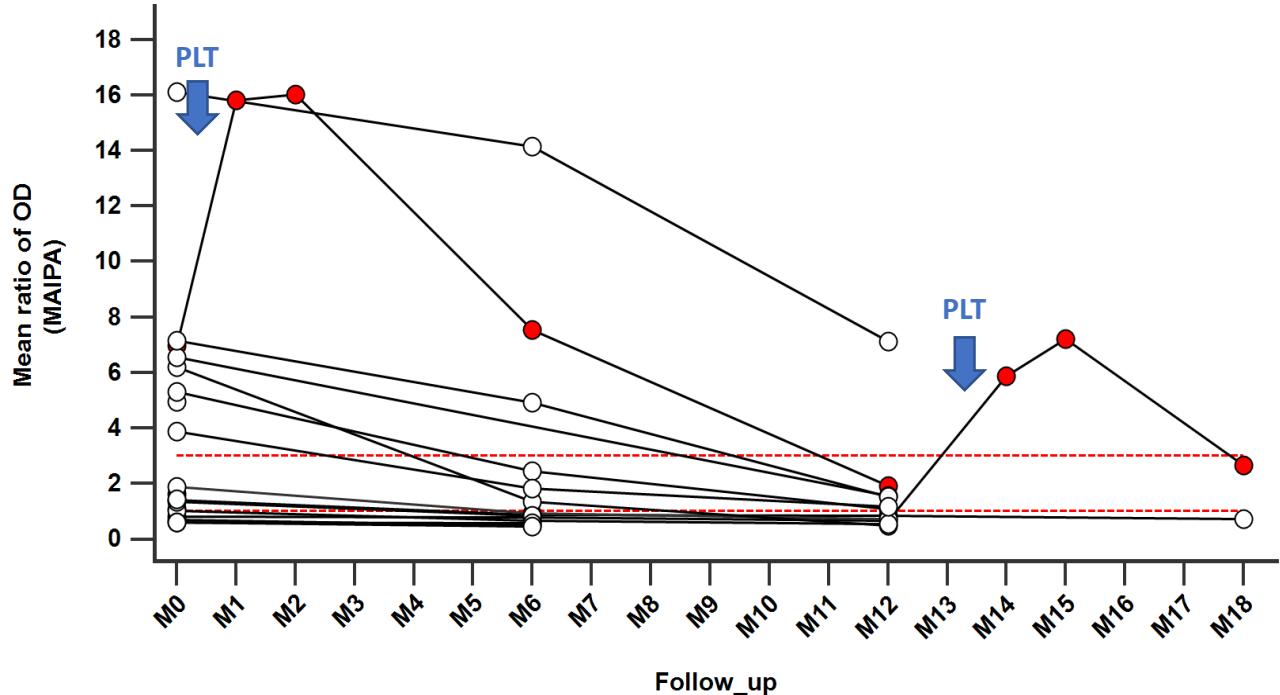

These patients had received greater amount of platelet concentrates

Ratio of positivity in Gypsy patients

Variables	Anti- α $\text{IIb}\beta_3$ antibodies		
	Low responders (n=7; 46.7%)	High responders (n=8; 53.3%)	p
Age, median [IQR]	39.0 [23.5-59.7]	40.0 [35.5-57.5]	1
Male, n (%)	4/5 (80.0)	1/5 (20.0)	0.12
Female, n (%)	3/10 (30.0)	7/10 (70.0)	
Family history of anti- $\alpha_{\text{IIb}}\beta_3$ antibodies	5/7 (71.4)	5/5 (100.0)	0.47
Blood products administration, n (%)	7/7 (100.0)	8/8 (100.0)	1
Platelet concentrates (PC) administration	4/6 (66.7)	7/8 (87.5)	0.54
Number of PLT			
nb < 5	1/4 (25.0)	2/6 (33.3)	1
nb = 5-10	0 (0.0)	0 (0.0)	
nb > 10	3/4 (75.0)	4/6 (66.7)

Blood products administration, n (%)	15/16 (93.7)	5/6 (83.3)	0.48

Conclusion

- **Confirmation des résultats** précédemment observés dans notre étude rétrospective régionale:
 - Patients Manouches à haut risque d'immunisation vs autres cas de TG
 - Type I (100% des cas)
- **Nouvelles données:**
 - Présence d'Ac chez les patients Manouches associée à la quantité de concentrés transfusées / dernière transfusion récente de PLT ;
 - Cinétique d'immunisation dans cette sous-population: la positivité semble régresser progressivement au cours du temps (1/9 fortement positif à 1 an chez les non-transfusés)
- **Éléments à confirmer:**
 - Femme Manouche et positivité des Ac ?
 - *ITGA2B* ? Mutations tronquantes bi-alléliques ?
- **Limites:**
 - Peu d'évènements transfusionnels pour l'instant
 - Faible effectif dans certains groupes ne permettant pas d'obtenir des résultats très significatifs
- **Perspectives:**
 - Envisager un recrutement plus large: national ? Européen ?
 - Financement ?
